Typing

Type on your own keyboard and every letter, digit and symbol goes straight to the deck, which has to be in name-edit mode first -- press Name, or select a track and then Name. Backspace deletes, Enter commits the title, and the arrow keys move the cursor. Accented letters lose their marks; anything the deck cannot show at all is refused rather than sent as something else.

Side A

Press RECORD and PAUSE together on side A (record-pause -- armed, but not yet moving), set its input to the line it is fed from, then press the button below. Once the tracks are ready you will be told to release Pause; the first 10 seconds after that are recorded silent, so the music clears the leader tape.

This erases everything on the disc: Stop, Erase, two confirmations, then Eject, sent over infrared with nothing further asked. It cannot be undone, and xD-Tools cannot see the result -- the deck has no way to report back.

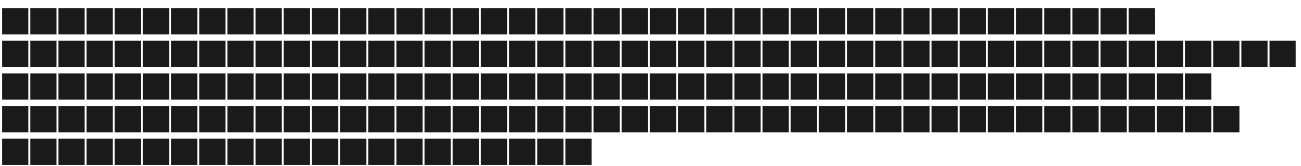

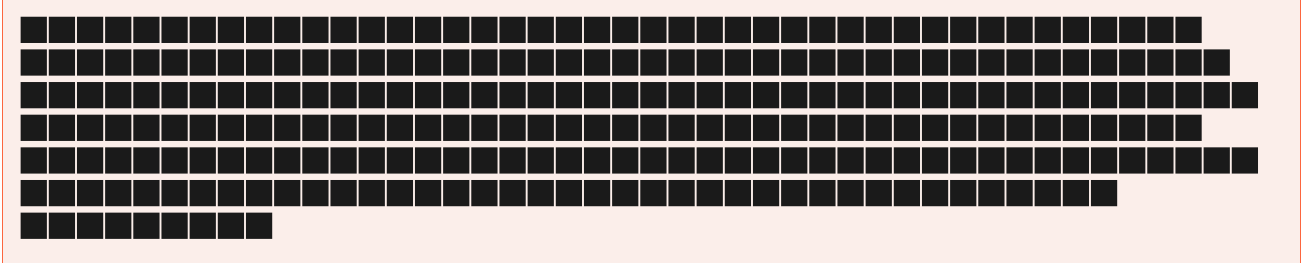

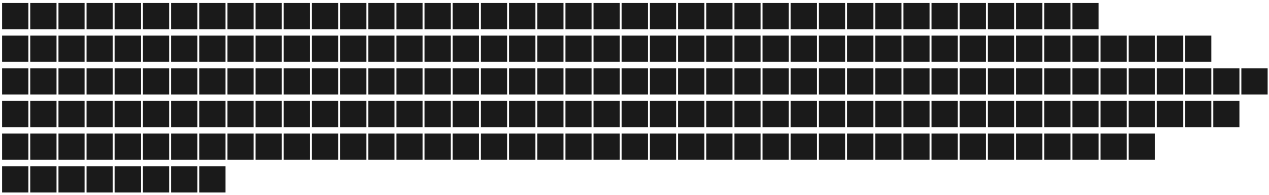

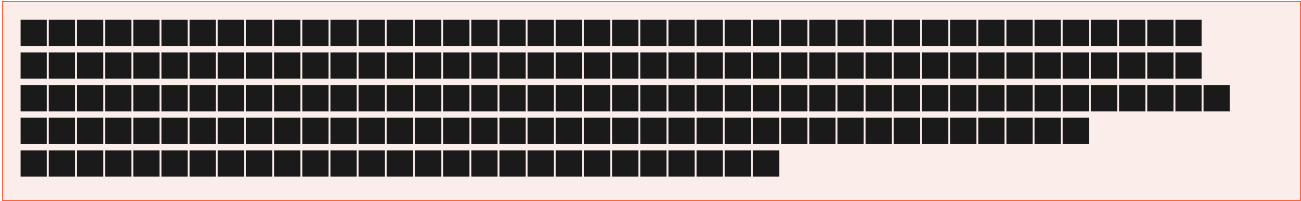

Make sure the right disc is loaded and its write-protect tab is closed.

This exact sequence is what was confirmed to work on one real deck. If yours needs something different, erase it from its own front panel instead.
